

7 Workday DevCon Updates HRIS Teams Should Know

Dark Mode

SWIPE

Built on Workday is growing

Workday's marketplace is growing rapidly with new Built on Workday apps.

You do not need an Extend SKU for these apps. They are maintained centrally by a partner.

Workday expects 300+ apps the end of FY26. As Incubane we'll make a big contribution to that number

And awesome to see our SMART goals app featured in the keynote

App Marketplace

Today: 88 innovation partners

70 apps

183 in development today

Agent System of Record

Agent Ecosystem

- **WD Agents:** Built natively by WD (think official, out-of-the-box agents).
- **Customer Agents:** Built by customers using Extend Pro, tailored agents
- **Third-Party Agents (Integrated):** External partner (e.g. Incubane) who plug into WD with APIs.
- **Third-Party Agents (Registered Only):** Visible in the system but without full WD integration.

Agent Gateway

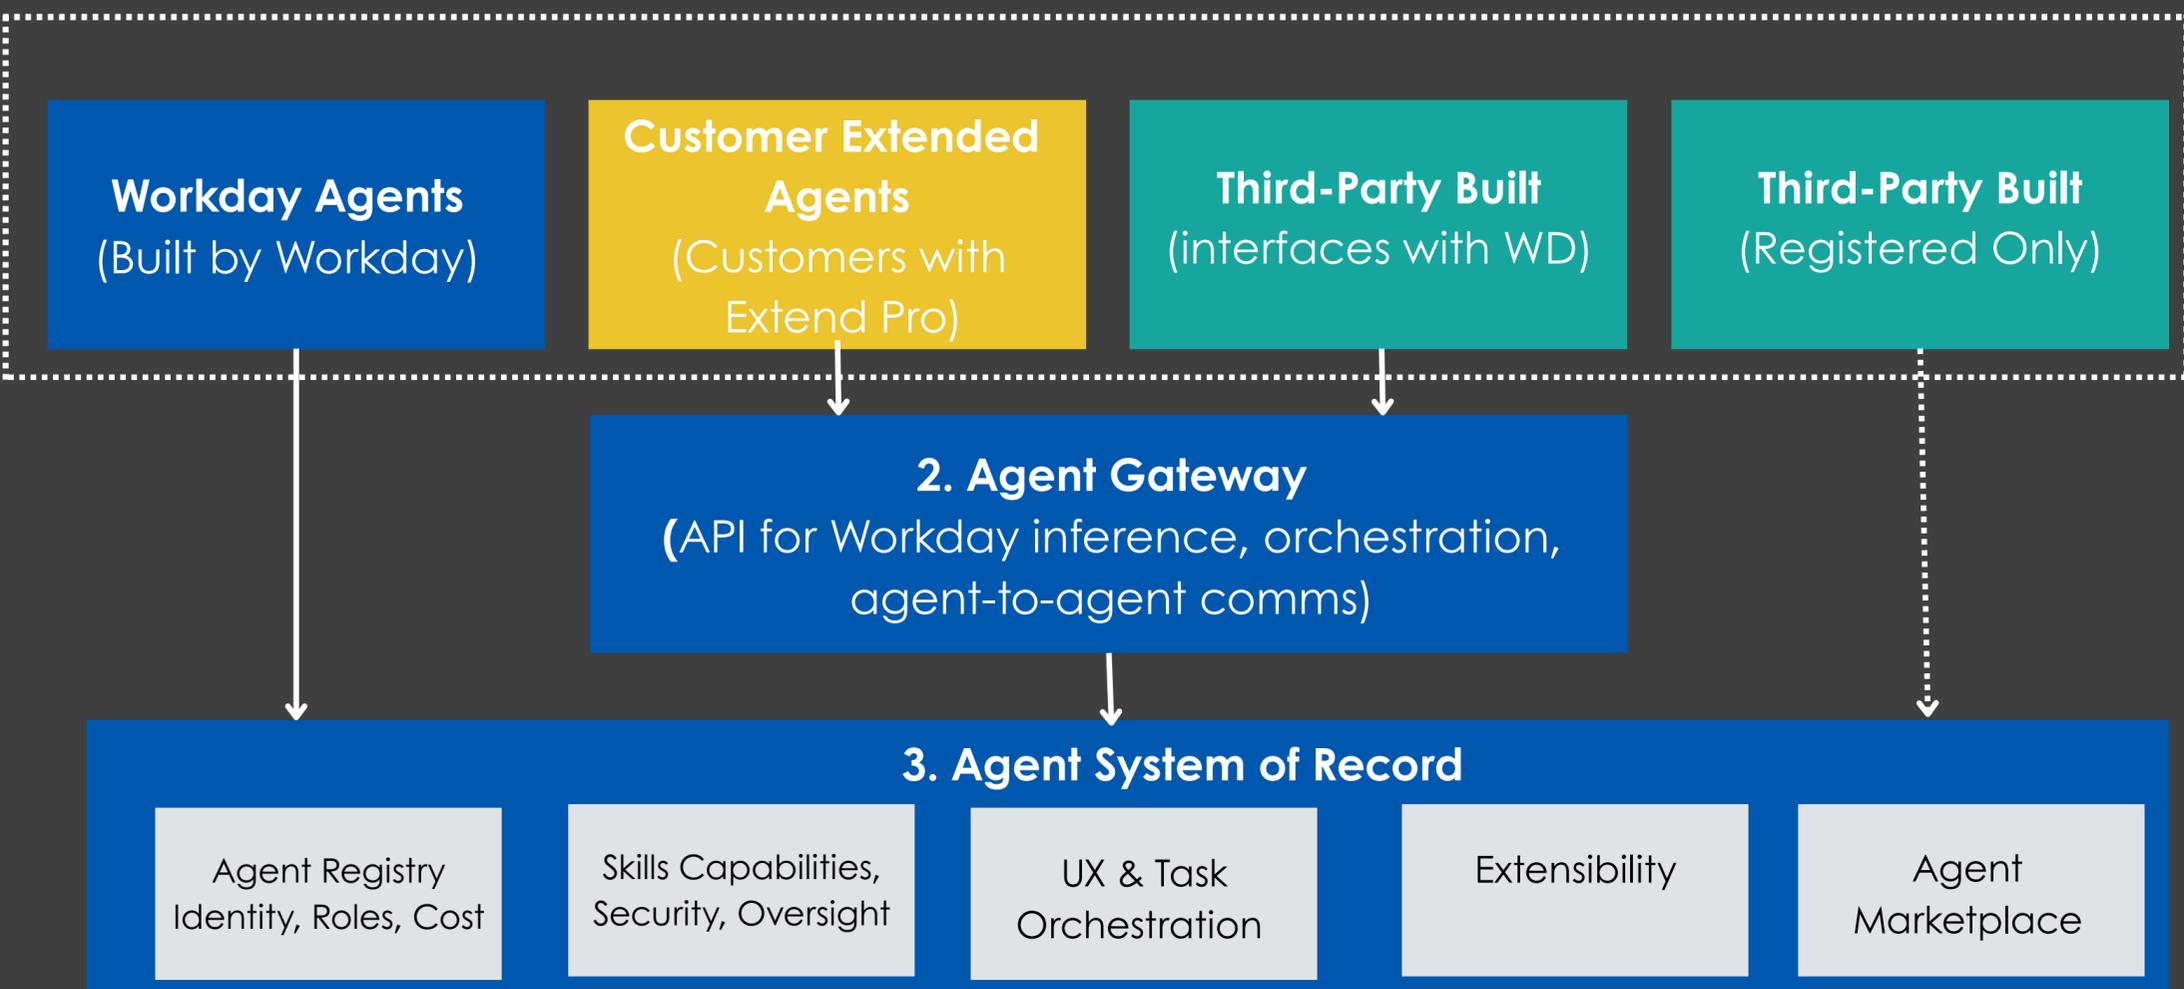

The Communication Hub

- Acts as the API brain for inference, orchestration, and agent-to-agent communication.
- Ensures agents talk to each other and follow security rules.

ASOR

Everything flows into the ASOR, the system of truth for digital workers:

- **Agent Registry:** Who they are, what they cost, what roles
- **Skills & Security:** What they're allowed to do
- **UX:** Seamlessly embedding agents into human workflows.
- **Extend Customization:** Use Extend to modify and create agents for your org's needs.
- **Agent Marketplace:** Browse, select, and onboard new agents easily.

Live Errors + Autocomplete in Extend

Spot typos, syntax issues, and logic errors in real-time.

Autocomplete boosts dev speed.
No more flying blind.

**Available to all Extend customers in
App Builder**

New Workday CLI = Git + Pull Requests

You can now connect App Builder to your org's version control (Git).

Create pull requests, deploy safely, automate builds.

Massive quality of life update!

 **Available to all Extend customers, with Extend Pro customers getting extra commands**

ONE MORE

AI Gateway Upgrade

New APIs to power smarter Workday apps:

- Report Q&A: Ask complex against custom reports
- Ask + Talk WQL: have natural conversations to get to your WQL formulas or queries
- Document Classifier: classify a document against a predefined list of categories
- Document Parser: parse any type of document to get up to 20 fields

This makes Workday a lot more conversational.

For Extend Professional Only

Drag + Drop AI Text Widgets

This will probably be one of the widgets we will use a lot going forward: the AI widget.

Makes it possible to generate text in a rich text box. You will be able to use multiple prompts and user variables to generate new output.

Simple to setup with a few lines of code or using the visual mode in App Builder

For Extend Professional Only

Orchestrate Enhancements

In one year there were over 353M Orchestration Events, and with these enhancements that will only continue to grow:

- Use Co-Pilot to generate orchestrations faster
- Auto-generate documentation with Co-Pilot
- Brand new debugger to troubleshoot orchestration flows quickly
- API Polling: Let your orchestration check for updates from other systems on a schedule (perfect for async integrations)
- Trigger integrations directly from Orchestrate (Works with Studio, Connectors, etc.)
- Smart runtime enhancements for better scaling and performance
