

Getting Ready for Orchestrate

Part 1 - Understand the
different use cases that
optimize your HRIT landscape

LEARN WHY YOUR ENTIRE TEAM NEEDS
TO UNDERSTAND ORCHESTRATE

Why Everyone on Your Workday Team Needs to Understand Orchestrate

 HRIS Managers: You need to understand Orchestrate to rethink your integration landscape. What should shift to real-time? What can now be owned in-house?

 Tech Leads / I Developers: You'll be working directly with this new toolset. Low-code \neq no complexity. You need to guide architecture and best practices.

 Functional Analysts / Configurators: This is the first time you can own integrations without needing Studio. That's a massive shift in autonomy.

 Business Leaders / CHROs: Orchestrate opens the door to faster, more agile HR automation. Fewer bottlenecks, more innovation, and measurable ROI.

WHY ORCHESTRATE MATTERS 

Why Orchestrate matters

Workday is doubling down on real-time, low-code integrations. These are the benefits of Orchestrate:

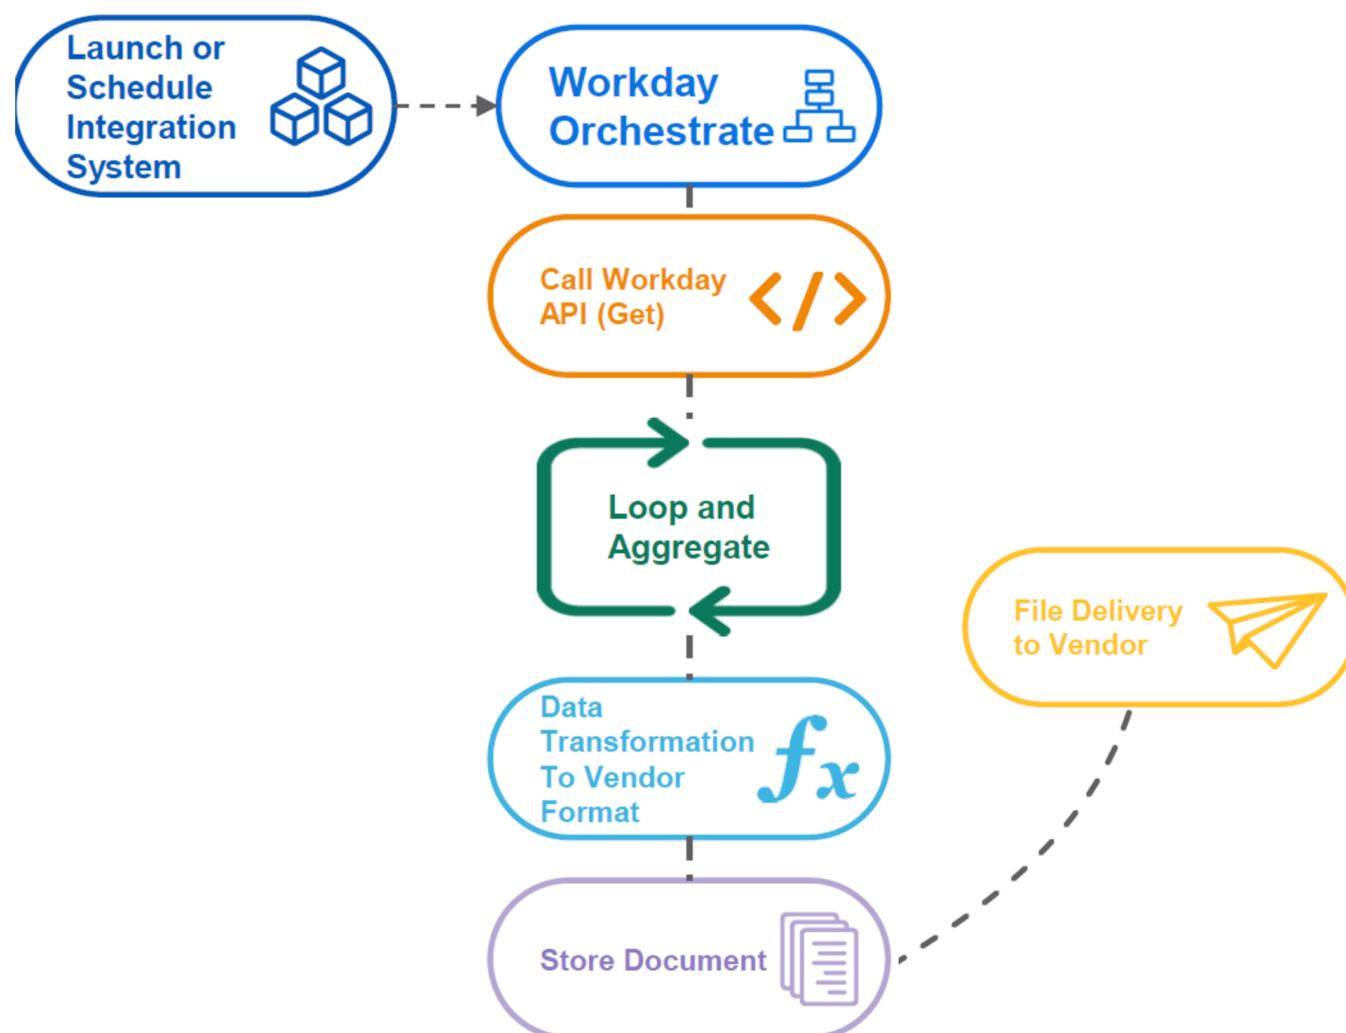

1. **Reduce project risk:** Orchestrate is much more flexible which allows you to ramp up quicker, deliver on timelines and being able to deliver a larger variety of use cases.
2. **More opportunities:** with more use cases, existing solutions, you will be able to deliver more value than with the legacy solutions
3. **Resources:** orchestrate has a less steep learning curve than Studio and is also easier to maintain.

ORCHESTRATE USE
CASES

Optimize integrations with Orchestrate

Studio will still have its place, but many of the use cases can now be done by Orchestrate. Classic integrations with looping, filtering and getting that vendor format will be quicker and easier to maintain with Orchestrate.

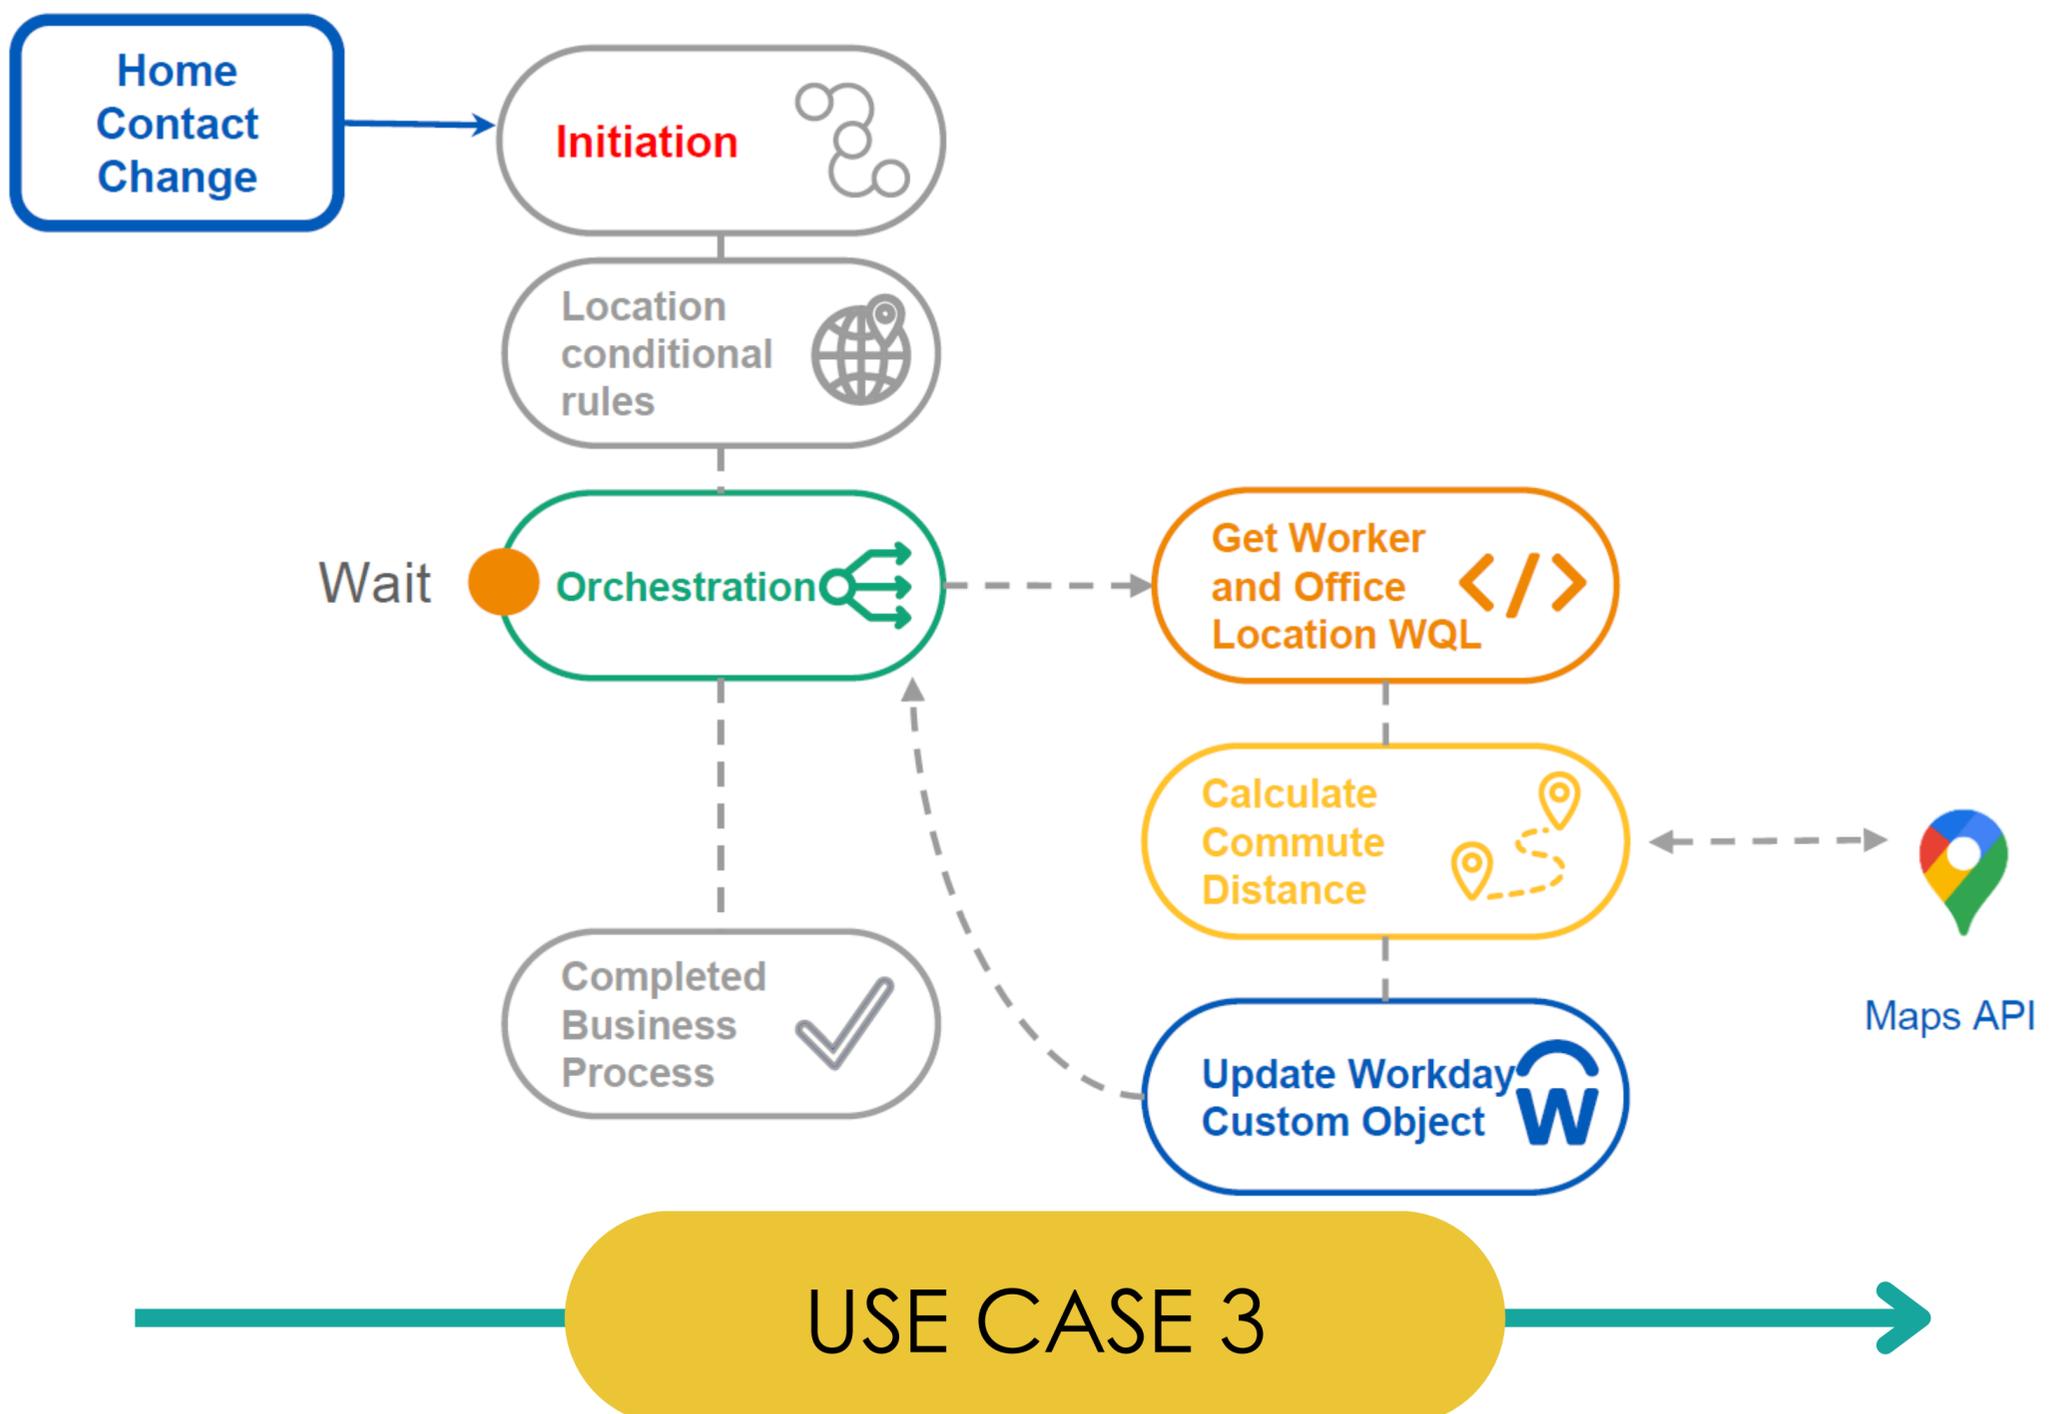

USE CASE 2

Orchestrate for BP integration

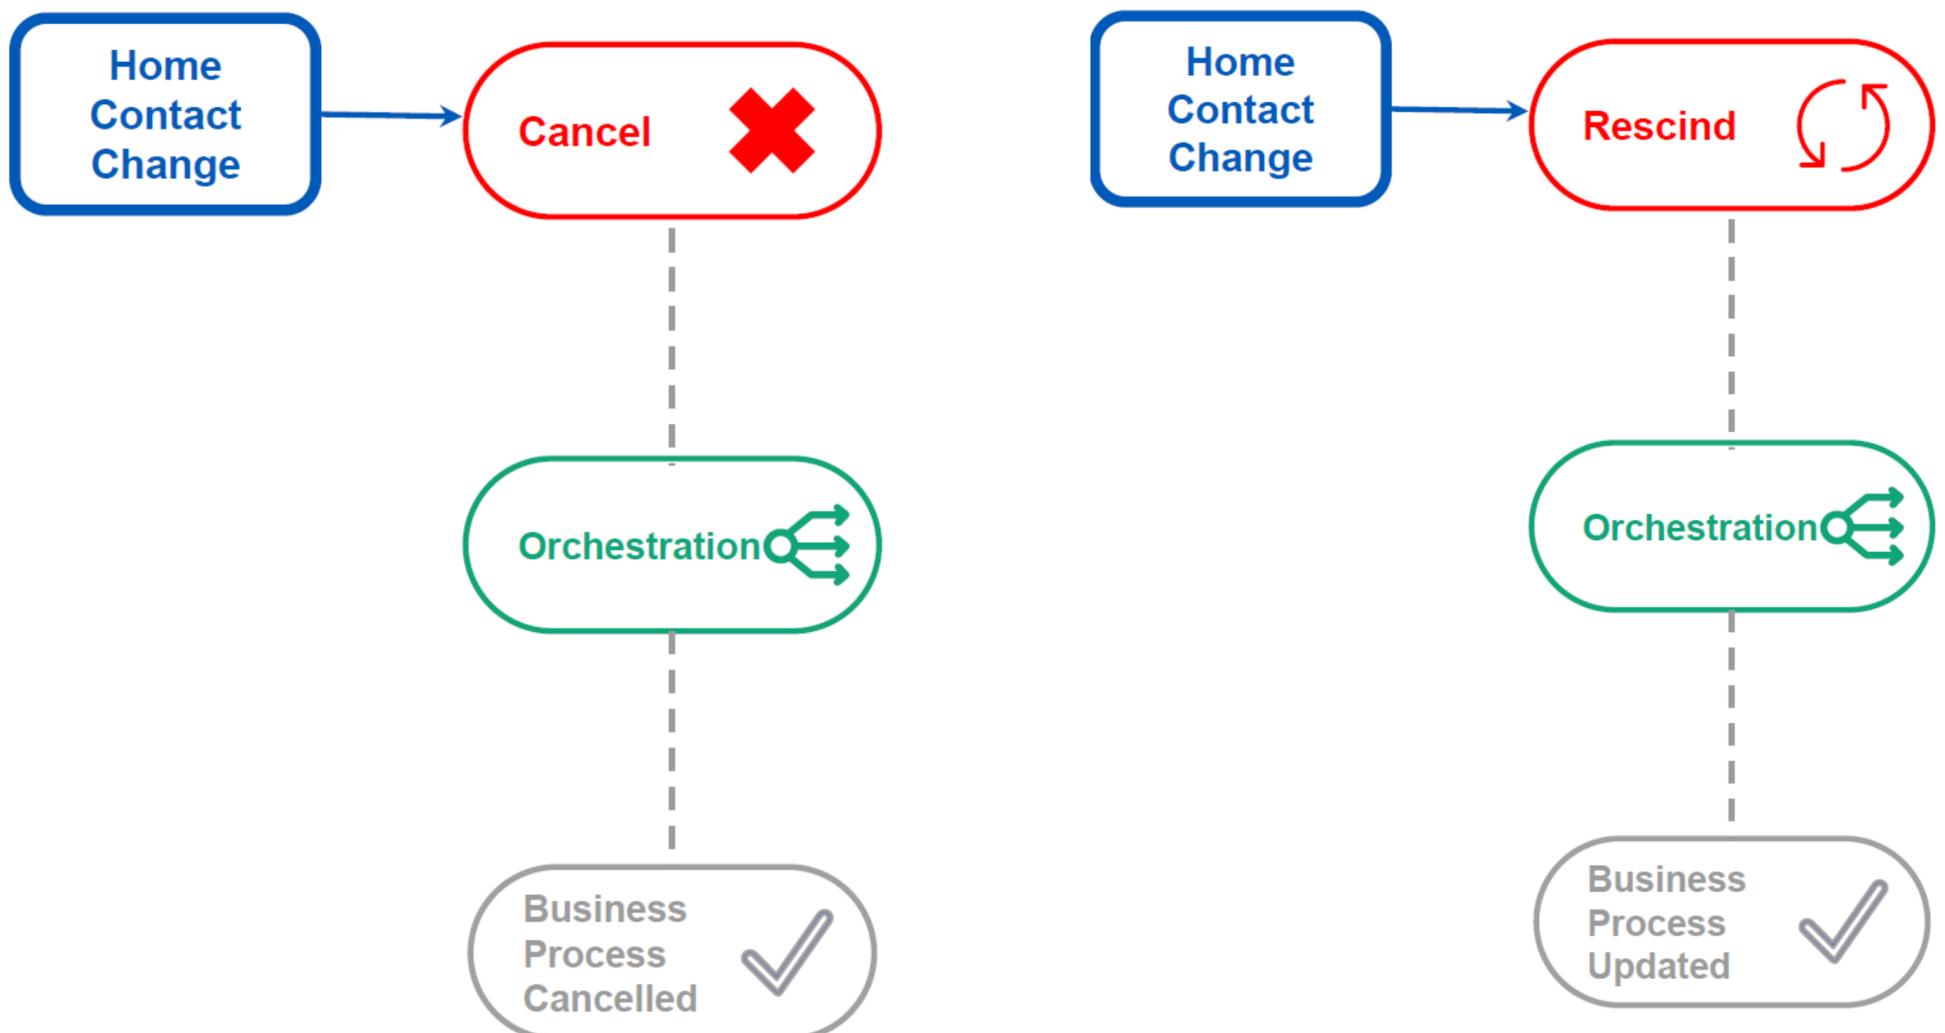

Add Orchestrate to any step in a BP and have real-time interaction with third party vendors. Imagine having a full end-to-end hire process where managers can order laptops in Workday and see the realtime progress from SNOW in Workday

Orchestrate is able to handle cancel/rescind

Orchestrate also allows you to effectively cancel and rescind, while making the appropriate updates in downstream systems.

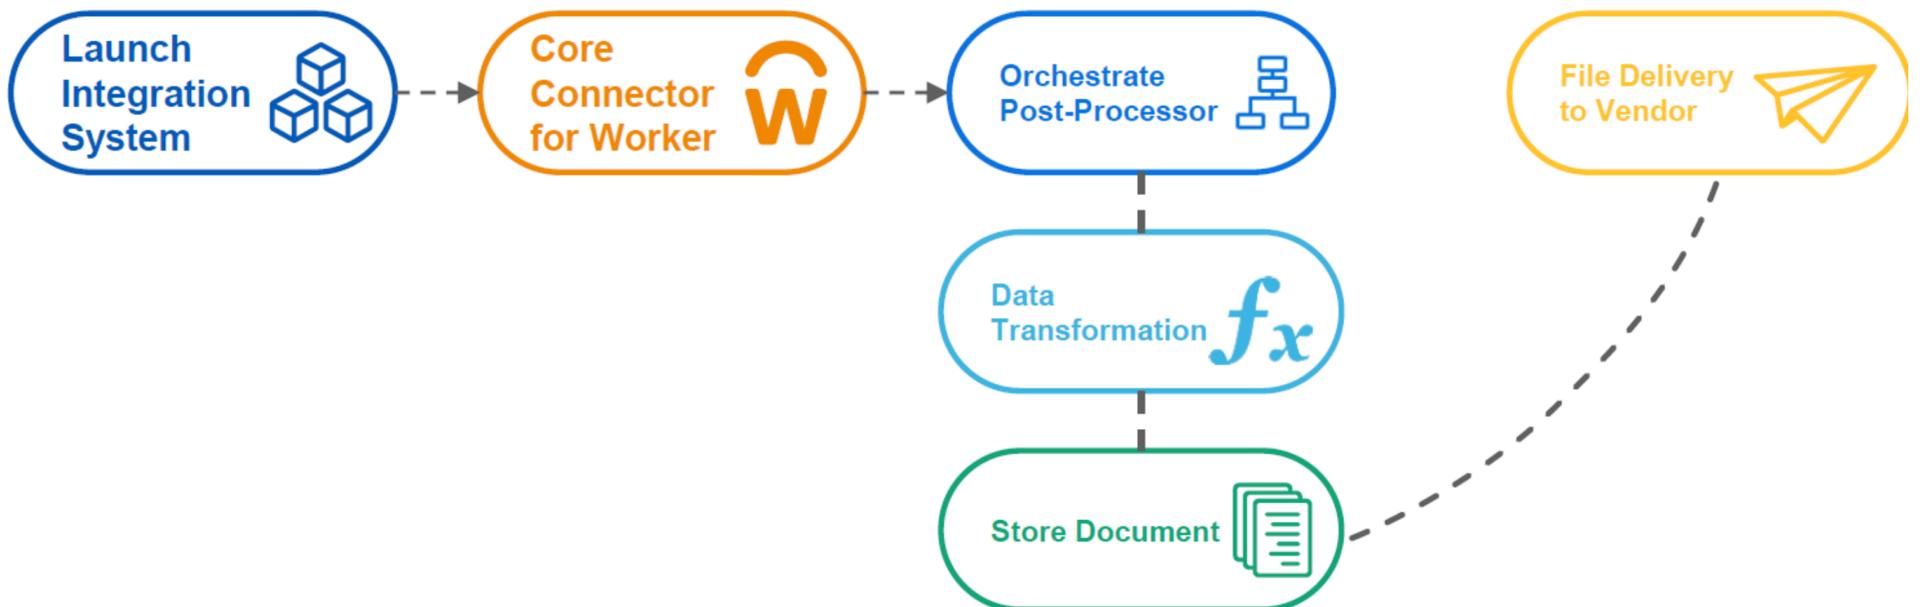

USE CASE 4

Data transformation becomes easier

Leverage a core connector and modify its output, so that it meets the requirements of your third party vendor.

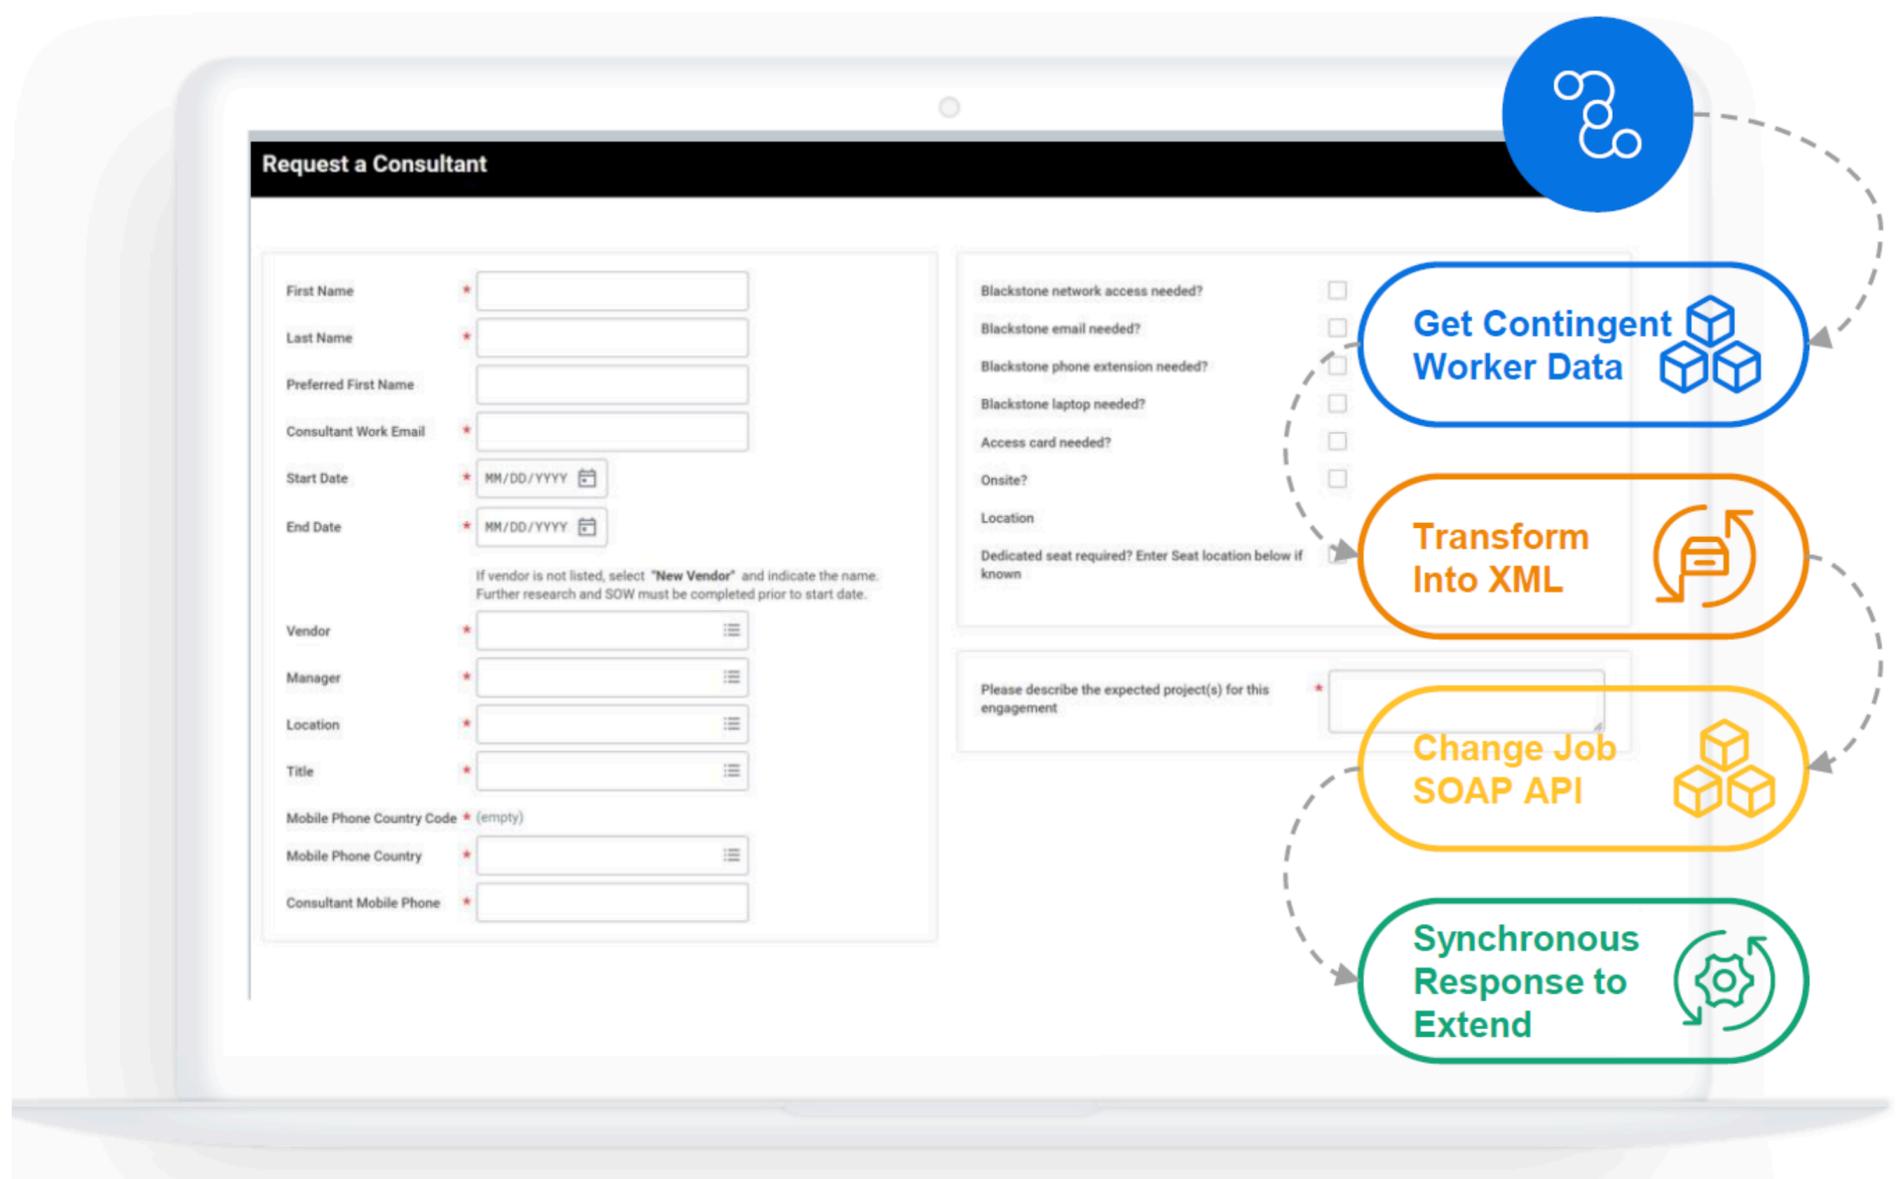

USE CASE 5

Real-time UI integrations in Extend

My personal favorite, attach an Orchestration to any UI task and in real-time connect with a third party and show the result in the UI.

KEEP SWIPING

When is Orchestrate available?

- **Phase 1 (Today)** - Available to all Extend customers
- **Phase 2 (DevCon)** - Priority access to customers who have applied to the general availability program
- **Phase 3 (Rising)** - Available to all remaining customers
